

# dellTad Security Management Value Proposition

When discussing the dellTad Security Services, the different levels, as shown aside come into play.

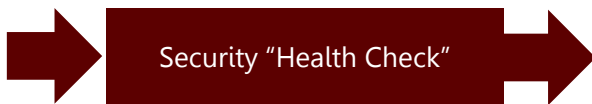

In the center of the scheme, the **GRC** level of Security defines the standards, communication lines, organization and dispensation of all security related matters. When talking about the security management **processes**, we deliver the expertise to audit, document, improve or assess the following domains:

security policy, organization of information security, classification and asset management, human resources security, physical security, operations and communications management, access control,

Information Systems acquisition, development and maintenance, business continuity management and compliance. DellTad has both generalist experts as in-depth specialists in one of these domains, with the necessary experience and certification to support your question. In the picture beside you see the comprehensive and easy-to-read presentation of a security management assessment. This expertise results in the following value propositions:

## Analyse the current security situation and define path to enhancement

- Evaluation against international security management framework: ISO27001
- Implementing Information Security Improvement Program (ISIP)

- Evaluation of compliance
- Roadmap to compliance (ISIP)

- Incident analysis and corrections
- Identifying weaknesses
- Clarifying corrections

### Provide guidance and directions to achieve the level of security required

### Provide the organisation with the required level of security knowledge
